

Roadmap to the Fusion Energy Economy

Fusion energy is near, with its tremendous potential as the “perfect” solution to produce clean energy at a scale and capacity to power electricity grids worldwide. Important breakthroughs in materials and computing power have fusion poised for an acceleration bringing it into the realm of energy and climate planning today.

Attend the workshop entitled **Roadmap to the Fusion Energy Economy**, sponsored by the Stellar Energy Foundation, Thursday, June 13th, at the Flatiron Institute (internal research division of the Simons Foundation), 162 Fifth Ave., New York City, 8:00am to 1:30pm. There is no fee to attend and there will be no solicitation of funds.

Hear representatives of the 25+ commercial fusion companies and the top US National Laboratories explain why they are optimistic about achieving technical feasibility for fusion energy in under 10 years!

As we start to sketch the cost of fusion on the grid, let’s apply lessons learned through other non-fossil generation, the utilities who purchase it and the customers they serve.

Join the strategic impact conversation amongst commercial investors, philanthropists, government officials and other early investors in fusion energy.

Together we will build fusion energy’s commercial future.
